PROFILE

GTM Engineer at Builder.io. Built an internal AI platform from scratch for territory generation, account and contact enrichment, product signals, outbound workflows, and automated inbound qualification. All sales reps use it daily; SDRs and marketing also work from the platform. Background in customer engineering, partner enablement, and full-stack product development.

EXPERIENCE

Builder.io | GTM Engineer 2023—Now

Role progression: Customer Engineer → Partner Enablement Engineer → GTM Engineer

Built an internal AI GTM platform from scratch, used daily by all sales reps and also by SDRs and marketing. Earlier work included customer engineering, partner enablement, Builder Academy, and the first production Builder CMS MCP server.

Appnovation | Full-Stack Developer 2021—2023

Built React and Electron applications and shared design-system tooling with TypeScript, Contentful, and GCP.

Jesta I.S. | Web Developer 2019—2021

Built enterprise retail software and worked with product and design on business-critical workflows.

SELECTED GTM WORK

AI territory generation + enrichment

Built an agent workflow that generates sales territories from prompts, configurable ICP criteria, or existing templates, then enriches companies and finds contacts matching target personas. Teams refine ICP criteria using HubSpot and product analytics, and run territory generation quarterly or when new reps join. Integrated Exa, Parallel AI, Clay, Similarweb, and Apollo for enrichment.

Account signals + outbound workflows

Connected HubSpot with product signals including platform engagement, credit consumption, and connected codebases. Built rep dashboards showing assigned accounts and prioritized signals: a first login from a target account triggers contact enrichment, with champions, power users, and executives informing priority. Reps can initiate email or sequencing from a signal with one click.

Dobby — automated inbound agent

Built an inbound agent that operates in Slack within the GTM platform. Dobby enriches incoming leads and triages them for qualification, recycling, nurturing, bot filtering, or partnerships. After extensive tuning of its triage and wording, it automatically sends the appropriate emails through HubSpot sequences.

Builder Academy

I built Builder Academy and owned its application engineering from the start, including learner progress and integrations. Enablement and content teammates contributed later. A broader team maintains it today.

Builder CMS MCP Server

Builder's MCP server lets AI clients inspect models and create or update CMS content. I built and launched the first production version. A broader team owns it now.

WHAT I CAN OWN

Territories + ICP

Build agent workflows for ICP configuration, territory generation, company enrichment, and persona-based lead discovery.

CRM + product signals

Connect HubSpot and product usage data to account research, contact enrichment, and prioritized rep dashboards.

Inbound + outbound

Build lead triage agents, HubSpot sequencing, and email actions that connect account signals to a rep's next step.

Enrichment stack

Exa, Parallel AI, Clay, Similarweb, and Apollo.

AI-assisted delivery

Use Claude Code and Cursor daily to build and iterate on internal tools, with live testing and tuning of agent behavior.

Product engineering

Build products from the first useful version through production, including interfaces, integrations, APIs, and data flows.

EDUCATION + LANGUAGES

Bachelor's in Computer Science

Collège LaSalle, Montréal | 2016–2019

Fluent: English, French, Arabic | Conversational: Spanish
